

# VALLEY PROTEINS WARD, SOUTH CAROLINA

**The Valley Proteins Company of Virginia desired to establish a South Carolina Facility to service their Georgia and South Carolina clients. The recycler of poultry by-products worked with Carlisle Associates to achieve an efficient design allowing them to unload, process, and ship product in a durable, maintainable structure. Carlisle Associates originally worked with the owner's design architect to coordinate the structural and MPE system efficiently into the building. Carlisle followed with the design of the waste handling system and the guardhouse/truck scales building. In 2002, a four-bay vehicle maintenance facility was added to handle the company's fleet of specialized transports.**

**Carlisle Associates continues to provide services at the facility and in 2015-2016 designed a new trailer parking lot, truck wash and drain pad. Construction should commence in 2016.**
